

Cement Plant Environmental Handbook

Second Edition

**NEW PUBLICATION
OUT NOW**

Introduction	6
1. Environmental context and sustainability challenges	8
■ The way forward: extended co-processing to produce alternative binders with a zero environmental footprint	10
Jean-Pierre Degré, Cementis, Switzerland	
■ Sustainability and cement – addressing evolving challenges	16
Philippe Fonta, Cement Sustainability Initiative (CSI), Switzerland	
■ CO₂ reduction: principles of the EU Emissions Trading System	20
Tino Villano, Lafarge Zement Wössingen GmbH, Germany	
■ Sustainability in the cement sector	22
Marco Goisis, Italcementi, Italy	
■ Proposed industrial coal reduction regulation for Ontario, Canada	25
Kåre Helge Karstensen, Foundation for Scientific and Industrial Research (SINTEF), Norway	
■ Our contribution to the societal challenges of the future	27
CEMBUREAU, Europe	
■ Tighter regulations for emissions	29
Phil Kerton, CPK Consultancy, UK	
2. Quarry operations and ecosystems	32
■ The Quarry Life Award: research and dialogue to promote biodiversity conservation	34
HeidelbergCement AG, Germany	
■ Quarry restoration leader in Medley, Florida	38
Audrey Becnel and Muhammad Khan, Titan Florida LLC, USA	
■ Water network improvements at Toral de los Vados	40
Ana Gonzalez de Aledo and Maria Luisa Bueno, Cementos Cosmos (Votorantim Group), Spain	
■ Conserving nature’s foundations: biodiversity management plan guidance	42
Philippe Fonta, Cement Sustainability Initiative (CSI), Switzerland	
3. CO₂ emissions and energy efficiency	44
■ Achieving the best energy consumption: the key drivers and some practical case studies	46
Lawrie Evans, EmCem Ltd, UK	
■ ACK’s waste heat recovery power generation system for cement plants	50
Chongren Zhong, Anhui Conch Kawasaki Engineering Co Ltd (ACK), China	
■ Waste heat recovery in India’s cement industry	54
R Nand Kumar, ACC Ltd, India	
■ Energy conservation in the cement plants of Japan	60
Japan Cement Association, Japan	
■ Maintaining the EU ETS in practice	62
Arthur Harrisson, Arthur M Harrisson Ltd, UK	
■ Reduction of CO₂ emissions: a winning strategy	65
Cementos Argos SA, Colombia	
■ CO₂ mitigation from the use of alternative fuels	68
Enrique De Hoyos Guajardo, Cemex México, Mexico	
■ The potential for energy savings from electrical power audits	71
Lawrie Evans, EmCem Ltd, UK	
■ Energy conservation: E=MC²	75
St Marys Cement Inc, Canada	
4. Strategies and systems for using AFRs	78
■ Developing an AF road map	80
Brian McGrath, ResourceCo, Asia	
■ The creation and use of alternative fuels around the world	82
David Hooper, Global AFR Ltd, Hong Kong	

■ Success in growing a waste fuel business	85
Geocycle, France and Belgium	
■ Alternative fuels and raw materials: a win-win solution for the Indian cement industry	88
Somnath Bhattacharjee and Ritu Bharadwaj, Institute for Industrial Productivity, India	
■ Key considerations in the introduction of alternative fuels and raw materials	90
Pavel Cech, Lafarge Asia Sdn Bhd, Malaysia	
■ Permitting requirements for co-processing of wastes in China and India	92
Kåre Helge Karstensen, Foundation for Scientific and Industrial Research (SINTEF), Norway and Yan Da-Hai, Chinese Research Academy of Environmental Sciences, China	
■ Secondary fuel preparation	97
Boris Sassenrath and Tim Hamer, Vecoplan AG, Germany	

5. Alternative fuels case studies **100**

■ Making a green commitment	102
Lucky Cement Ltd, Pakistan	
■ Experiences with wastes as alternative fuels and materials	104
Tino Villano, Lafarge Zement GmbH, Germany	
■ Using FIRSU as an alternative fuel	107
Enrique De Hoyos Guajardo, Cemex México, Mexico	
■ Environmental implications of introducing solid fuels into the energy mix of the Egyptian cement industry	110
Fernas El-Hakim, Arabian Cement Company, Egypt	
■ The use of biomass at Votorantim Cimentos' Nobres plant, Brazil	112
Livia Ballot de Miranda and Naiara Meireles de Souza, Votorantim Cimentos, Brazil	
■ Hon Chong cement plant in Vietnam – The “Best Sustainable Performers 2009-2013”	114
Luong Thi Phuong Lan, Holcim Vietnam, Vietnam	

6. Emission monitoring and abatement **116**

■ Using advanced modelling tools to reduce NO_x and CO emissions from cement kilns	118
Tahir Abbas and Michalis Akritopoulos, Cinar Ltd, UK	
■ The filter bag as a key component for reducing emissions and costs	122
Dr Georg Rathwallner, Evonik Fibres GmbH, Austria	
■ Mercury: addressing ever-tightening regulations	127
John Kline and Charles Kline, Kline Consulting LLC, USA	
■ NO_x reduction – when SNCR is not enough	131
John Kline, Kline Consulting LLC, USA	
■ Experiences with the new regenerative thermal oxidation (RTO) system at the Wopfing cement plant	134
Gerhard Philipp, Wopfinger Baustoffindustrie GmbH, Austria	
■ NO_x emission reduction at the Vidal Ramos plant	137
Mario Henrique Interlenghi and Carlos Roberto Moreira da Cunha, Votorantim Cimentos, Brazil	
■ Using high-sulphur raw materials and fuels in a cement plant – a case study	140
Prakash Singh, P Chandrasekhar and L Rajasekar, UltraTech Cement Ltd, India	
■ Formation and control of dioxins in modern preheater/precalciner dry-process kilns	143
Kåre Helge Karstensen, Foundation for Scientific and Industrial Research (SINTEF), Norway	
■ More than meets the eye: emissions (bio-)monitoring, dispersion and risk analysis as innovative tools	146
Maria João Botelho, Secil and José Manuel Palma-Oliveira, University of Lisbon/Secil, Portugal	

7. Cement milling and products **150**

■ Reducing CO₂ emissions through cement grinding optimisation	152
Mike Sumner, Keith Marsay, Ricardo Stoppa and Josephine Cheung, Grace Construction Products, UK	
■ Production and use of cements with artificial pozzolan	156
Silvia Regina Soares S Vieira and José Eustáquio Machado, Votorantim Cimentos, Brazil	
■ Limestone calcined clay cement	159
Karen L Scrivener, Jérôme D Laffely and Aurélie Favier, Ecole Polytechnique Fédérale de Lausanne, Switzerland	

Cement Plant Environmental Handbook

Second Edition

NEW publication

OUT NOW

**Free to subscribers of
International Cement Review**

The Cement Plant Environmental Handbook, 2nd Edition is an essential reference for cement professionals seeking to operate cement plants in accordance with best practice and to the highest environmental standards.

Published by International Cement Review, this handbook features a collection of 45 specially-commissioned articles by leading experts and cement producers from around the world, covering best practice in cement manufacturing technology from the perspective of the environment, energy efficiency and sustainability.

- 45 authoritative articles by leading international cement experts
- best practice, expert viewpoints and recent case studies
- covers alternative fuels, clinker substitution, quarry management, CO₂ reduction, emissions abatement, SCMs and more!

**Subscribe to International Cement Review and receive
your copy of The Cement Plant Environmental Handbook,
2nd Edition absolutely FREE!**
